SUBJECT INDEX TO VOLUME 29

Alloys
  binary, 639
    directional solidification of, 639
Aluminum-rich castings, porosity formation in, 859

Binary mixture condensation, effects on turbulent mixed convection heat and mass transfer, 599
Bridgman crystallization process, 227
Buoyancy-driven flow, effect of external magnetic field on, 625

Convection,
  combined, in an eccentric annulus, 707
  conjugate forced, 265
    effect of multiple obstructions on, 265
  conjugate natural, from heat source array, 1
  laminar, in a square cavity, 199
    Penalty-Galerkin Finite Element approach to, 199
  laminar mixed, 313
  laminar natural, 211
  mixed, around a sphere, 397
  mixed, in open periodic cavities, 33
  mixed, hot block effect on, 297
  natural, in melting and solidification of pure metals, 51
  natural, suppression by azimuthal partitions, 65
  oscillatory natural
    predictions of, effect of Time Marching schemes on, 575
    effect of time-varying thermal boundary conditions on, 645
  Rayleigh-Bénard, roll patterns in, 167
  transient laminar natural, from isothermal spheres, 85
  transient natural
    from a finned surface, 103
    for thermal storage, 103
    and nongray gas radiation, 671
  turbulent mixed, effects of binary mixture condensation on, 599
Convective transport, 511

Crystal growth, vertical zone melting, 131
  heat flow in, 131
  interfaces in, 131

Directional solidification, of alloys, 639

Energy transport
  in porous media, 281

Finite Volume Radiation Solution Method, 181
Free surface momentum,
  in porous media, 281

Heat conduction
  Boundary Element approach to, 243
    as applied to materials processing, 243
  transient, 543
    during quenching of Copper convex surface, 543
    during quenching of Stainless Steel convex surface, 543
Heat transfer
  conjugate, in a dessicant airflow system, 689
  effects of binary mixture condensation on, 599
  in concrete walls, 373
  in drying and pyrolysis of porous media, 331
  literature survey on, 441
  and unsteady flow, 613
Heat transport
  turbulent, new Near-Wall Two Equation model for, 417
Hot block elevation effect, 297

Induction motor
  and rotor, thermal field in during start-up, 525

Mass transfer
  conjugate, in a dessicant airflow system, 689
  effects of binary mixture condensation on, 599
  in concrete walls, 373
  in drying and pyrolysis of porous media, 331
Materials processing, 243

Mechano-sorptive creep,
in timber, 147
Control Volume Finite Element model of, 147
Mixing layers
two-dimensional, spatially developing, 485

Near-Wall Two Equation model, 417
Nongray
gas radiation, 671

Phase change material, 19
used for cooling, 19
Pure metals, 51

Recirculating flows, jet generated, 741
Rotor
thermal field in, 525

Solar systems
dynamic, thermal performance of, 357

Timber, mechano-sorptive creep, 147
Control Volume Finite Element model of, 147
Time Marching schemes, 575

Waste-to energy power plant, 795
Welding,
fluid flow in, 115
heat transfer in, 115
